PROFILE SUMMARY

Data Analyst with a Master of Data Science from the University of Guelph (4.0 GPA) and hands-on experience building dashboards, ETL pipelines, and reporting solutions that inform real decisions. Proficient in Python, R, SQL, Power BI, and Tableau with a strong track record of translating complex data into actionable insights

TECHNICAL SKILLS

Data Analysis & Visualization: Excel (Advanced: PivotTables, VLookUp, Power Query), Power BI, Tableau
Programming Languages: Python, R, SQL (MySQL)
Libraries/Frameworks: R Shiny, pandas, NumPy, ggplot2, tidyverse, Matplotlib, seaborn
Tools: Git/GitHub, Linux
Techniques: Data cleaning, data wrangling, A/B Testing, statistical analysis, hypothesis testing

WORK EXPERIENCE

Research Data Analyst

April 2026 – Present

University of Guelph - Plant Agriculture

Guelph, ON

- Built an open-access R Shiny dashboard using ggplot2 to visualize K₂O, P₂O₅ trial outcomes across Ontario field sites, enabling the research team to iterate on results across multiple crop seasons
- Translated data findings into actionable recommendations that directly informed OMAFA guidelines for corn and soybean growers across ~1.9M acres of Ontario farmland
- Merged incoming trial data with 99+ historical Ontario experiments in R, catching inconsistencies early to ensure dataset reliability for modeling and policy recommendations
- Built and automated reusable R visualization and reporting pipelines, reducing turnaround time on trial results and freeing the team to focus on analysis

Data Analyst (Research & Analytics)

May – August 2025

University of Guelph - Mathematics & Statistics

Guelph, ON

- Built Python and R pipelines to clean, wrangle, and process 18,000+ multi-source government environmental records, cutting manual processing time by 50% and catching data integrity issues that previously slipped through
- Produced trend reports and visualizations for government stakeholders across a 10-year longitudinal dataset, identifying key trends and KPIs that informed ongoing environmental policy discussions
- Developed a data validation workflow that the research group adopted as standard practice, improving reporting efficiency and consistency across the team

PROJECTS

BC Wildfire Geospatial Analysis | R, ggplot2, leaflet, sf, terra, rvest | [LINK](#)

Oct. – Nov. 2024

- Scraped and processed BC government wildfire records (2012–2024) in R, integrating WorldClim temperature and elevation rasters to analyze environmental drivers of wildfire occurrence across British Columbia
- Built interactive geospatial visualizations using leaflet and ggplot2, overlaying 6 years of wildfire data on monthly temperature rasters, identifying that fires concentrated in the 600–900m elevation band

Trip Budget Planner Dashboard | R, R Shiny, shinydashboard, ggplot2 | [LINK](#)

Nov. – Dec. 2024

- Built an interactive R Shiny dashboard modelling trip spending across travel, accommodation, and daily categories, running simulations to flag 15–20% budget overrun risks before users committed to a plan
- Designed the dashboard for non-technical users, enabling self-serve budget planning without analyst support and reducing the need for manual spend calculations across multiple trip categories

EDUCATION

Master of Data Science

Sept. 2024 – Sept. 2025

University of Guelph | GPA: 4.0/4.0

Guelph, ON

Bachelor of Engineering in Information Technology

June 2019 – July 2023

Sarvajnik College of Engineering & Technology | GPA: 3.7/4.0

Surat, India

CERTIFICATIONS

AWS Cloud Practitioner Essentials, AWS Training & Certifications

Nov. 2025
